

Go with the flow

- control water flow with FloMasta™ and save

Control the flow of water in and around the home with minimal loss of water pressure as part of a total home water-saving solution.

One of the simplest and easiest ways to make a real difference to water consumption in the home is through the use of water flow control devices.

The perception that controlling the flow of water in the home means a significant loss of water pressure – something most householders want to avoid,

especially in the shower – is an outdated one. In fact, water can be saved by controlling the flow of water with minimal impact on water pressure.

There is a simple and effective way to control flow with minimal loss of pressure.

The Nylex FloMasta™ is a self-calibrating flow control valve that will control flow regardless of water pressure. FloMasta™ will monitor the water pressure and automatically adjust itself many times each second to control the water flow (litres per minute) and therefore the amount of water used.

The Nylex FloMasta™ range includes:

Flow Control Discs – Circular discs that regulate water flow regardless of pressure designed for use with existing showerheads and tap fittings. They are available in 6, 9 and 12 litre per minute options.

Inline Flow Regulators – BSP inlines that regulate water flow regardless of pressure for use with existing showerhead, faucet and basin fittings. They are easy to install, available in 2, 4, 6, 9 and 12 litre per minute options and in a range of colour finishes including chrome, gold, white, almond ivory and brass.

All products in the FloMasta™ range can be fitted to existing fittings, which eliminates the need to purchase expensive new fittings or change the look of your décor.
